Education

University of Toronto

Expected Graduation Date: June 2027

- Arts and Science Internship Program - Bachelors of Science in Computer Science
- Coursework: Algorithms, Theory, Software Design, Hardware Engineering, Web Dev

Work Experience

Lead Software Engineer

Virtual — September 2024 - Present

- Collaborating with university students to develop a **full stack Android app** to help medical students learn vascular surgery concepts, enhancing educational resources for **future healthcare professionals**.
- Designing **wireframes and UML diagrams** to streamline project workflow, improving overall clarity and direction for the development team.
- Demonstrated proficiency in following the **Software Development Life Cycle**, to ensure seamless functionality and an **improved user experience**.

Projects

Spotify Companion App (Java)

[GitHub repo](#) 

- Developed a **full-stack app** integrating **Spotify and Azure APIs**, providing advanced music recommendations through data analysis insights.
- Optimized search functionality with **natural language processing (NLP)**, improving user experience through **sophisticated lyric and description-based queries**.
- Ensured seamless app functionality by continuous **system integration tests** and deployment.

Business Website (HTML, JS, CSS)

[GitHub repo](#) 

- Designed and developed a business website featuring an **interactive photo gallery** page showcasing the client's work.
- Utilized **tailwind CSS** for the front-end **and Node.js** for a backend server that communicates with the **ImageKit API**

Data Vis Website (HTML, JS, CSS)

[GitHub repo](#) 

- Developed a site to display a **large dataset** of alien reports in Canada through a variety of **interactive visualizations**.
- Incorporated **D3.js**, the **Leaflet API** and **Bootstrap** to enhance the visual appeal of the website.

Olympic Data Analysis

[GitHub repo](#) 

- **Processed and visualized large datasets** using **Python (pandas)**
- Created a **GUI** through a designated home page and sub-pages to display each calculation performed on the data separately.

Assembly Dr. Mario

[GitHub repo](#) 

- Recreated Dr. Mario using vanilla **Assembly** with custom **sounds** and **images**.
- Implemented **game logic** for the pills, which adjusts its vertical position based on keyboard input and gravity.

Skills

Languages: Python, Java, C, HTML5, CSS, JavaScript, Lua, Assembly

Tech Stack: Git/Github, Linux, Bash, IntelliJ, Android Studio, Visual Studio Code, PyCharm, Saturn, Microsoft Office
